

## Supported Products:

- OBi504vs
- OBi508vs

## Firmware Version 4.0.2 (5492)

January 20, 2017

### Features and Enhancements:

- Thawte CA G3 certificate authority support.
- New parameter called "DeviceInfo.WAN.OpenSSLCiphers" to control the ciphers used for SSL connections.
- Support **X\_MWIRoute** and **X\_VMWIRoute** parameters for every SP service page.
- Support using "user@obi-number" in call routing rules in the caller-id field and in the target field in the argument inside a trunk.
- Add the SpoofCallerID option under each Voice Gateway (VGn) configuration.
- Handle a URL used as DHCP Option 66 value instead of "servername."

### Bug Fixes:

- If the message body starts with a SPACE or TAB, the HTTP client parse may consider it as LWS and lead to a download failure.
- AuthUserName that contains %% cannot authenticate correctly.
- When renewing without a broadcast address, the udhcpd causes the interface to shut down.
